

# Midterm Sprint Project Proposal

Group 6

Sarah Murphy, Zachary Collier, and Kyle/Scarlett Budgell

## Overview

We propose to develop a custom website for a blacksmith's business specializing in handmade trinkets crafted from select metals. This website will serve as an online storefront where customers can browse, learn about the blacksmith's craft, view available products, and place orders.

## Key Features of the Website

### 1. Home/Overview Page

- **Purpose:** This page will introduce the business and their craft. It will include information about the business, the blacksmith's background, services offered, and a short description of the metals used.
- **Navigation:** Links to the product listing page, order page, and other important sections will be easily accessible.

### 2. Product Listing Page

- **Purpose:** Showcase the range of handmade trinkets available for purchase.
- **Design:** We will show products in a grid-based format that allows customers to easily scroll through the products. Each item will be accompanied by an image, a short description, price, and the available materials (copper, silver, brass, etc.)

### 3. Order Page:

- **Purpose:** This will allow customers to place orders for specific products and choose the materials they want.
- **Form Structure:** The order form will let customers select products, materials, and quantity while also being able to fill out customer information such as name, email, shipping address and phone number.
